Announcing Panther's New Dashboard Technology

Panther is pleased to announce its new Dashboard Framework

The new Framework is designed to help our clients keep an eye on the current pulse of production, but it also assists in predicting future performance. The Dashboard achieves these goals by providing key information based on past and current data. This information assists clients in effectively making crucial, real-time decisions to correct potential problem areas such as production, shipments, inventory levels and real-time processes.

The information presented in the Dashboard framework is provided through various web-parts. These are small, mini views of data that can be added, arranged, configured and saved by each user to allow for quick and consistent analysis of data. The information contained in each of these web-parts is derived from various areas or systems such as shop floor production and real-time data collection. This information can also be combined with business data to help focus on specific or problematic areas of interest to help users pinpoint the root cause of problems.

Our Dashboard is easy to use, provides timely data and, most importantly, provides direction for implementing improvements and solutions. The Dashboard provides key users, managers and corporate executives the ability to monitor information from various areas throughout the mill or corporation. This information is presented visually through graphs, charts, gauges, tables and KPI's to help ensure business goals and targets are being met. Information is simply presented, easy to examine, and, in some cases, indicates where action needs to be taken.

We are excited about this powerful addition to Panther's suite of software. If you would like more information on how the Dashboard can help you drive your bottom line, contact Panther at sales@panthersys.com, or talk with a representative at 360-750-9783.
